

The Access-Productivity Gap

Think access doesn't impact productivity and security?
Think again.

64%

of organizations have their productivity impacted on a weekly – or daily – basis because of access issues

73%

of respondents require 15 or more minutes to get access to infrastructure
(30% requiring more than 30 minutes)

52%

52% of development teams have missed deadlines because they were stuck waiting for access

53%

53% of teams reported being held accountable for missed deadlines, even when they couldn't access infrastructure

Security ends with it.

What happens when there's no access? Workarounds.

73%

of organizations maintain backdoor access to systems

53%

share credentials across teams

42%

embrace shadow IT

Why does this matter?

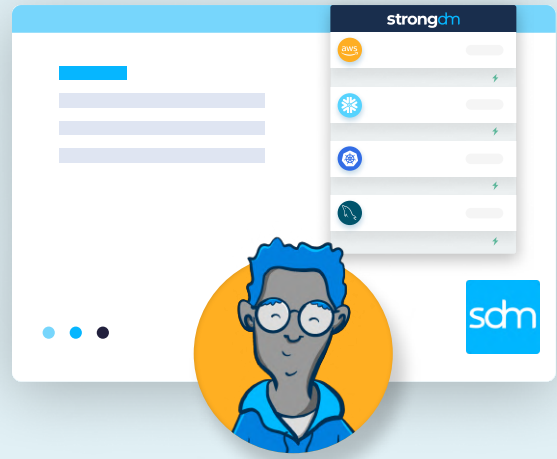

61%

of all breaches involved credentials used to gain access

Fixing the Gap: People-First Access

Fixing these issues is surprisingly simple: make access as simple as possible for the humans that need it. What happens when you do that?

Healthcare Organization

Improving Access by Removing a VPN

- Replaced VPN with a people-first access platform, completely eliminating the cost of the VPN
- Reduced support tickets by **60%** – the number of tickets related to VPN issues
- Significantly fewer credentials required across their infrastructure, IT, and governance teams
